- delete – Deletes the license key for the installation.

MISC TOOLS

wp gf tool [command]

Commands:

- clear-transients
- empty-trash Delete the trashed entries.
- verify-checksums Verify Gravity Forms files against the checksums.

INSTALLING GRAVITY FORMS AND ADD-ONS

The above commands all require Gravity Forms to be installed. However, if Gravity Forms is not installed then you can use this add-on to install it along with all the other official Gravity Forms add-ons.

The install command will download and install the latest version Gravity Forms available for auto-update and then run the database setup. The license key will be saved in the plugin settings.

A valid license key is required either in the GF_LICENSE_KEY constant or the –key option.

Examples:

- wp gf install -key=xxxxx
- wp gf install -key=xxxxx –activate
- wp gf install gravityformspolls -key=xxxxx
- wp gf install gravityformsquiz -key=xxxxx

Once installed, the database can be set up or upgraded separately using the setup command. The command will not re-run the setup unless the –force flag is set.

Examples:

- wp gf setup
- wp gf setup –force

Gravity Forms and official add-ons can be updated using the update command.

Examples:

- wp gf update
- wp gf update gravityformspolls

Check the current version using the version command.

Examples:

- wp gf version
- wp gf version gravityformspolls

REQUIREMENTS

1. WordPress 4.2+
2. Gravity Forms 1.9.17.8
3. WP-CLI version 1.0+
